Debian Linux Quick Reference

System — Discover your environment

```
whoami; hostname; pwd       # Username *and* computer name *and* current directory
ps aux                      # Running processes
```

Navigation — Explore directories

```
ls -lh                      # List files and directories
cd /tmp                     # Change directory
cd ..                       # Move up one directory
```

Files — Read and manipulate

```
cat /etc/os-release         # Display file contents
head -n 5 file.txt          # First 5 lines
tail -n 5 file.txt          # Last 5 lines
grep "root" /etc/passwd     # Search for text
find /home -name "*secret*" # Search for files by name
cp file.txt copy.txt        # Copy file
mv file.txt new.txt         # Move/rename file
rm file.txt                 # Delete file
```

Networking — Basic diagnostics

```
ip addr                     # Network interfaces
ping -c 3 127.0.0.1         # Test connectivity
curl http://www.nfl.com/scores > scores.txt
```

Remember: Commands execute within the context of the **current user** and **working directory.**
